SOV/1517

Malbiyev, Rafael' Isaakovich

Prichal'nyye sooruzheniya neftebaz (Jetties of Petroleum Bulk Plants)
Leningrad, Gostoptekhizdat, 1958. 165 p., 1,400 copies printed.

Ed.: V. I. Shpakovskiy; Exec. Ed.: M. I. Fedotova; Tech. Ed.: A. B. Yashchur-
zhinskaya

PURPOSE: This book is intended as a textbook for engineers and technicians engaged in the transportation and storage of petroleum products.

COVERAGE: The author discusses the planning, construction, and exploitation of jetties for moving liquid and tare petroleum cargoes on rivers and reservoirs. He provides data on the tanker fleet, the types of jetties at petroleum bulk plants, the technical equipment, and the mechanized facilities for transporting liquid and tare petroleum cargoes, and discusses fire prevention measures taken at petroleum jetties. There are 23 references, of which 18 are Soviet, 4 English, and 1 German.

TITLE: A Refinement of the Method for Determining Fluorine in the Products of the Zinc and Lead Industries (Utochneniye metody opredeleniya ftora v produktakh tsinkovogo i svintsovogo proizvodstva)

PERIODICAL: Sb. tr. Vses. n.-i. in-ta tsvetn. met., 1956, Nr 1, pp 169-171

ABSTRACT: When determining F in Zn concentrates and dusts, the results are greatly affected by the duration of the calcining employed to oxidize sulfide S. It is established that in calcining samples at 800°C, a portion of the F is lost in the form of volatiles. Therefore, instead of calcining, the samples are fused with Na₂O₂. The melt is leached with water, and H₂SO₄ is added up to 1:1 acidity, whereupon the F is driven off in the form of H₂SiF₆. The determination ends with colorimetry of the peroxide Ti complex until color disappears.

TITLE: Calculation of the energy spectrum of oscillation frequency modulated by a stationary normal noise

SOURCE: Elektrosvyaz', no. 7, 1966, 67-72

TOPIC TAGS: wave function, noise modulation

ABSTRACT: The evaluation of the energy spectrum of oscillations whose frequency is modulated by a stationary normal noise encounters, in the case of arbitrary magnitudes of modulation index, significant mathematical difficulties. The authors show that these difficulties can be surmounted if instead of an approximation by a square wave function (or by one, characteristic for RC filters) one utilizes specially chosen approximations of the energy spectrum of the modulating noise. Final calculational formulas are obtained in closed form for two types of approximation functions, and graphs of the relative widths of the energy spectrum of FM oscillations and of the shape of the energy spectrum as functions of the effective modulation index are given. Orig. art. has: 3 figures and 8 formulas. [JPRS: 38,202]

$\Delta t = \pi / \omega_c = 1/2f_c$ is the spacing of the time quantization of the process; $\omega_c = 2\pi f_c$ is the frequency of quantization; and $N = T / \Delta t$ is the number of reading values on the integration interval. The present author evaluates the error originating in this case. A simple relationship is obtained which relates the value error dispersion to the high frequency spectrum of the function being integrated. An example of application of the results obtained is investigated. Orig. art. has: 1 table and 14 formulas.

TITLE: The error of digital integration of a steady-state random process

SOURCE: Avtomatika i telemekhanika, no. 2, 1966, 93-99

TOPIC TAGS: random process, error function, error measurement, ~~digital~~ integration

ABSTRACT: In some cases, for example, in the employment of digital computers, integration of a continuous steady-state random signal $\xi(t)$ is performed by summation of its discrete values according to the formula

$$I = \int_0^T \xi(t) dt \approx \Delta t \sum_{n=1}^N \xi_n = I_*$$

where I_* is the approximated value of the integral I ; $\xi_n = \xi[(n - 1/2)\Delta t]$ are reading values of the function $\xi(t)$ in the points $t_n = (n - 1/2)\Delta t$, corresponding to the means of the intervals $(\Delta t(n - 1), \Delta tn)$ (it is assumed that the rounding off error is negligible);

TITLE: Vulcanization process for fluorocarbon elastomers. Class 39, No. 171567

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 11, 1965, 78

TOPIC TAGS: fluorocarbon elastomer, vulcanisation, vulcanizing agent

ABSTRACT: An Author Certificate has been issued for vulcanizing agents for fluoro-
 carbon elastomers. To improve the physical and mechanical properties of the vulcan-
 izates and to simplify the vulcanization process, the vulcanizing agents used are
 cobalt N, N'-ethylenebis(salicylidinimine) and/or titanium salicylidinimine. (SM)

EXCERPTA MEDICA Sec 8 Vol 9/8 Neurology Aug 56

3395. MALAWSKI S. Orthop. Clin., Sch. of Med., Warsaw. *Stabilisation with Gruca's method of a flaccid foot paralysed after poliomyelitis BULL. ACAD. POLON. SCI. 1955, 3/7 (265-267)

The author presents the evaluation of 49 cases who had undergone ankle and mid-tarsal arthrodeses and tendon transplantation when indicated. The method did not include the subtalar or the calcaneo-cuboid joints (Gruca), and the arthrodeses were reinforced by counter-sinking tibial or calf banked bone plates across the joint surfaces after removal of the cartilage. The fusion thus extends from the distal tibial epiphysis to the metatarsals. At an average of 4.5 yr. postoperative-ly, good or better results were found in 57% of cases treated under 16 yr. of age and in 88.5% of the older age group. The best functional results occurred when the foot was set in 95-110° of equinus and in 5° of valgus. It was felt that the mobility of the talocalcaneal joint improves the adaptability of the foot.
